

# CooVox-U20 V1.0.5 Patch1 Changelog

## Requirements:

This patch is only for upgrading CooVox-U20 V1.0.5. If your firmware version is lower than V1.0.5, please upgrade it first.

Clean the browse cache to display the firmware version correctly.

## 1. Background Fixed

- (1) PNP force close
- (2) Corresponding directory will be added in the background automatically in web upgrading or extension user uploading
- (3) Pickup specified extension feature error (To activate, please rewrite the Pickup Code \*\* in Feature Codes, or reset to Factory Defaults)
- (4) Pinset error in DialRule
- (5) Email protocol formats that Email to FAX supports

## 2. Background Added

- (6) Follow me and call forward configuration are automatically deleted when deleting the extension
- (7) Static route setting of virtual interface address
- (8) Batch upload & download for Callgroup and pickupgroup on User Extensions page

## 3. GUI Fixed

- (9) "Pickup group" changed as manual input for more group numbers
- (10) Voice mail function key unable to be modified

#### **4. GUI Added**

- (11) French system language (Cache cleaning required)
- (12) Spanish system language (Cache cleaning required)
- (13) Options for more local network config in global SIP configuration
- (14) "Allow Guest" option in global SIP variables
